

EU.FFICIENT CEF Launch event

Join EU.FFICIENT communities: Connect, Learn & Co-Create

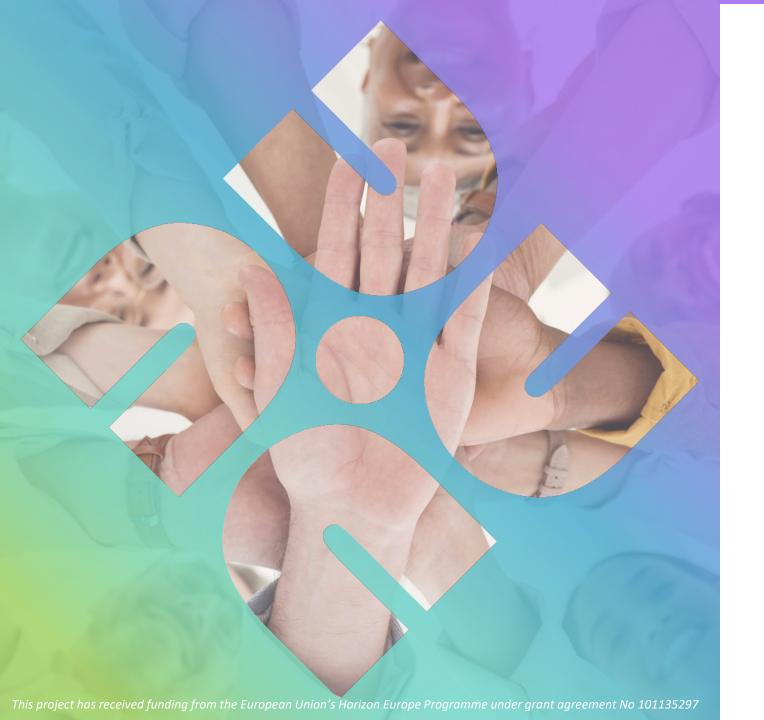

Agenda

- 13.00 Introduction to EU.FFICIENT Communities of Expert Facilitators [CEFs] (KU Leuven)
- 13.10 Presentation of the four Communities of Expert Facilitators:
 - Advanced Manufacturing (Flanders Make)
 - HealthTech (CIT UPC)
 - Mobility (KIT)
 - Al/Digital (University of Maribor)
- 13:30 Platform demonstration session (Innoget)
- 13:50 Q&A and closing

Introduction

Dionysios Panagiotopoulos – KU Leuven

About EU.FFICIENT

About EU.FFICIENT

Our objective:

EU.FFICIENT aims at enhancing collaborative processes across Europe through the establishment of Communities of Expert Facilitators (CEFs)

What are CEFs?

Platforms for industry experts, academics, public sector representatives, and society members to come together, share knowledge, and co-create solutions.

Are you an Expert Facilitator?

Are you a Technology Transfer Officer, Business Developer, Research Manager, Group Leader, or any other professional bridging the gap between research and industrial application?

Facilitator and can benefit from the EU.FFICIENT community!

Are you an Expert Facilitator?

Expert Facilitators play a crucial role in fostering cooperation and innovation, as they

- tackle complex technical fields, model essential skill sets, and ensure projects achieve tangible results
- **connect** diverse entities, i.e. industry, academia, research organizations, and public bodies
- create a **culture of innovation** by delivering high-impact solutions.

How to benefit from EU.fficient?

We create, pilot and validate **Communities** of **Expert Facilitators** to improve **co-creation proceses**.

Members of communities gain access to:

- personalised training,
- networking and
- hands-on learning.

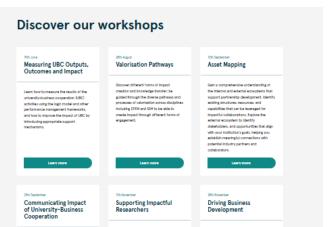

Training programme

- > Use our skills assessment tool and find relevant workshops for you
- Programme empowers Expert Facilitators with essential skills to drive impactful collaborations

Communities of Expert Facilitators (CEFs)

Advanced Manufacturing

HealthTech

Mobility

AI/Digital

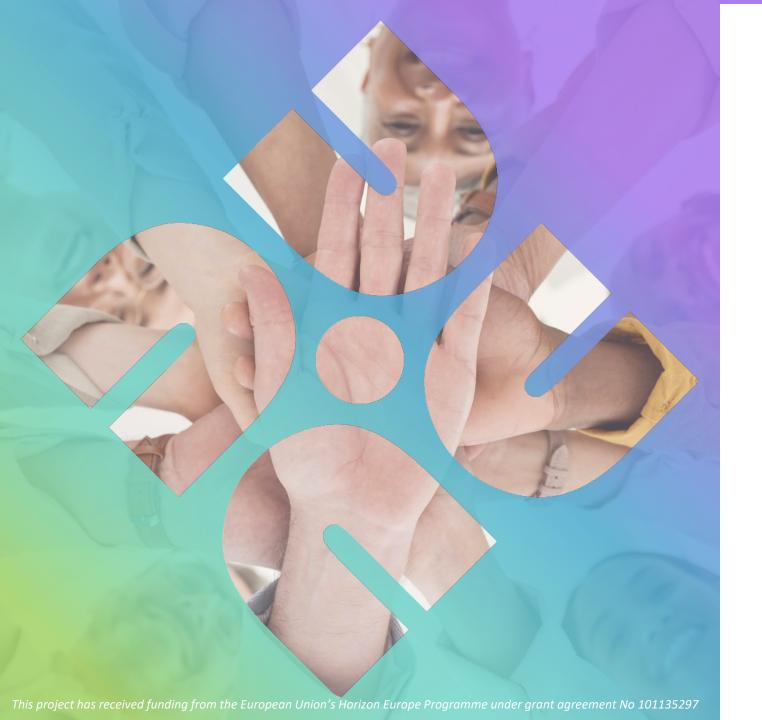

Advanced Manufacturing

Christophe Bruynseraede – Flanders Make

Advanced Manufacturing

- ☐ Uses **innovative technologies** → improve products or processes
- ☐ Integrates cutting-edge tools, automation and data analytics
 - → enhance productivity, flexibility and sustainability

Digital Twins

Additive Manufacturing (3D Printing)

Advanced Materials

Industrial Internet of Things

Automation & Robotics

Cyber-Physical Systems

Artificial Intelligence & Machine Learning

■ **Expert facilitators**: project managers – innovation managers – business developers – tech transfer professionals - ...

Advanced Manufacturing

Long-term trends / challenges

Smart, interconnected products & production systems

Agile, resilient, people-centric manufacturing organisations

Customised products at the price of serial production

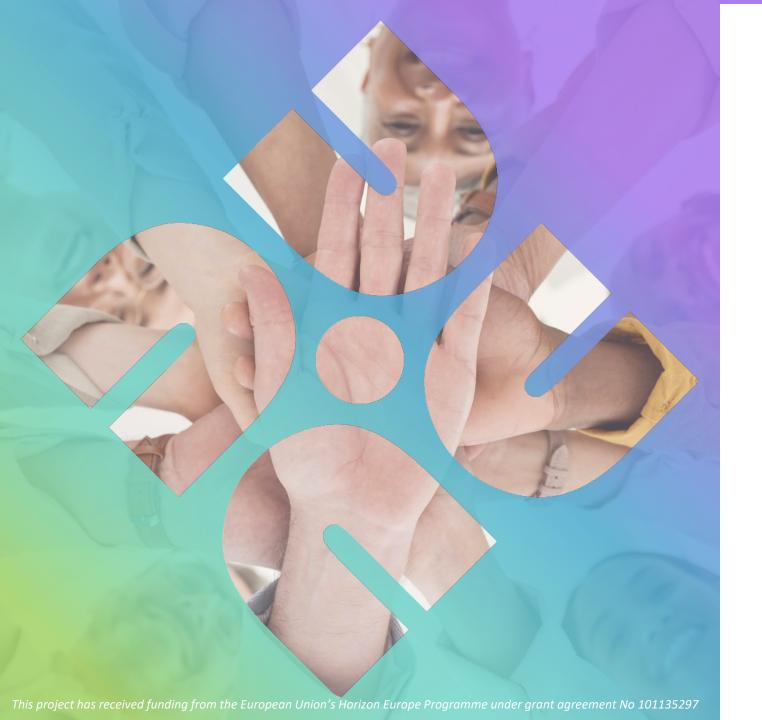

Sustainable products and production systems

Health Tech

Radivoj Malić – CIT UPC

Health Tech

HealthTech - **integration of technology and healthcare** to create solutions that improve patient outcomes, while reducing healthcare cost. The way healthcare is delivered is being transformed by advanced technologies and its applications, such as:

AI/ML

Robotics & Automation

Internet of Medical Things (IoMT)

Big data analytics, etc

Enabling:

Remote patient monitoring Real-time diagnostics, preventive care

Enhanced medical training

Mental health support, etc.

Roles of Expert Facilitators: Project Managers and Innovation Managers in R&D; Business Developers, Clinical Innovation Coordinators; TechTransfer officers, etc.,

They typically belong to institutions such as Universities, Research Centers, Research Foundations, Hospitals, HealthTech Clusters and Associations, etc.

Health Tech

Pressing Challenges in HealthTech

- Patient Safety and Ethics
- Digital Health Literacy
- Cybersecurity & Data Protection, Regulatory Complexity
- AI/ML Limitations & Bias
- Human-Technology Interaction
- Technology acceptance

Trends:

- Al-Powered Diagnostics and Clinical Assistance
- Advancements in Wearable Health Technology
- Robotics & Automation
- Telehealth and Remote Patient Monitoring
- Al for predicting possible future pandemics / epidemics

Mobility

Annika Bastian – KIT

Mobility

"The ability to move or be moved freely and easily" - Oxford Dictionary

Therefore, any mean of mobility and its surrounding systems can be discussed within this CEF

From Bicycle, to E-Scooter, Car, Truck, Train – you name it

<u>Enabling</u>: Design and discuss the mobility of the future, the needs and pains of society concerning mobility, as well as specific technologies in the field of mobility

Mobility

Challenges around Mobility

- Technological complexity (e.g. digitalisation of mobility needs)
- Regulatory Compliance (e.g. connectivity across borders)
- Infrastructure Development (e.g. connection country to city)
- Consumer Acceptance (e.g. hydrogen powered vehicles)
- Sustainability (e.g. the future of electric mobility)

Trends:

- Net zero emission
- Physical and digital mobility infrastructure
- Combining rising mobility needs without compromising living quality in cities
- Micro-Sharing and Flex Commuting

Al/Digital

Tanja Botić, Milan Zorman – UM

AI/Digital

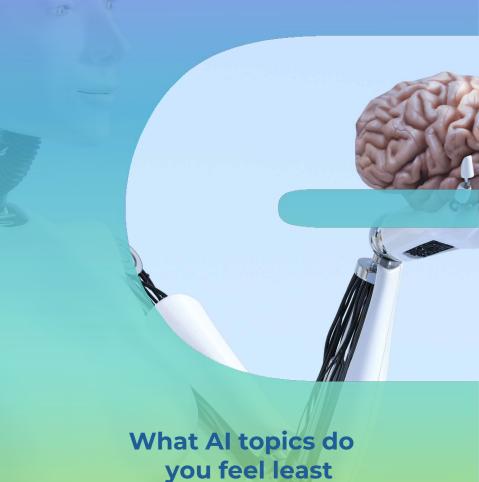

Key Competencies for EU Facilitators:

- Digital literacy aligned with EU Digital Edu. Action Plan ---> Digital literacy & AI tool proficiency
- Understanding of AI as per EU AI Act principles ---> Critical thinking on data & automation
- Ethical, responsible and sustainable use of Al ---> Ethics in decision-making with Al
- Skills for inclusive and human-centric AI facilitation ---> Adaptive learning mindset

confident about?

(live poll)

EU-Relevant Training Priorities:

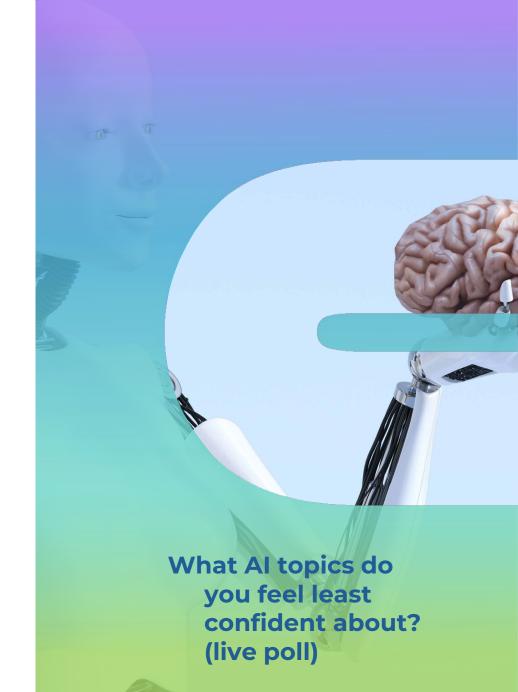

- Trustworthy & Explainable AI (XAI)
- Bias detection and algorithmic fairness
- Data governance, privacy & GDPR compliance
- Sector-specific AI use-cases (health, education, public services, private organizations)

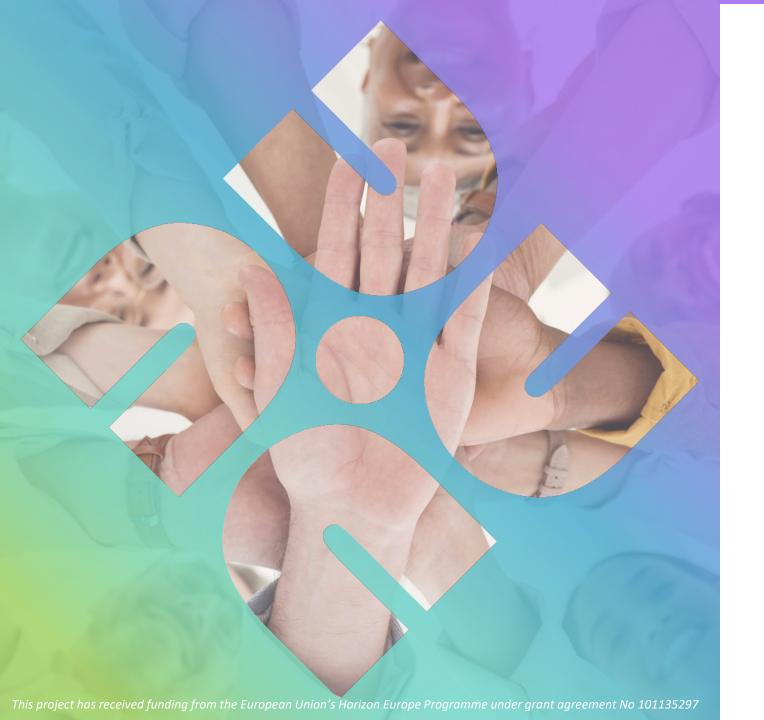

For Organizations:

- Build cross-functional Al understanding
- Ensure inclusive access to AI tools
- Promote transparent and accountable AI use
- Align AI use with EU Digital Decade goals
- Encourage participation in <u>AI regulatory sandboxes</u>

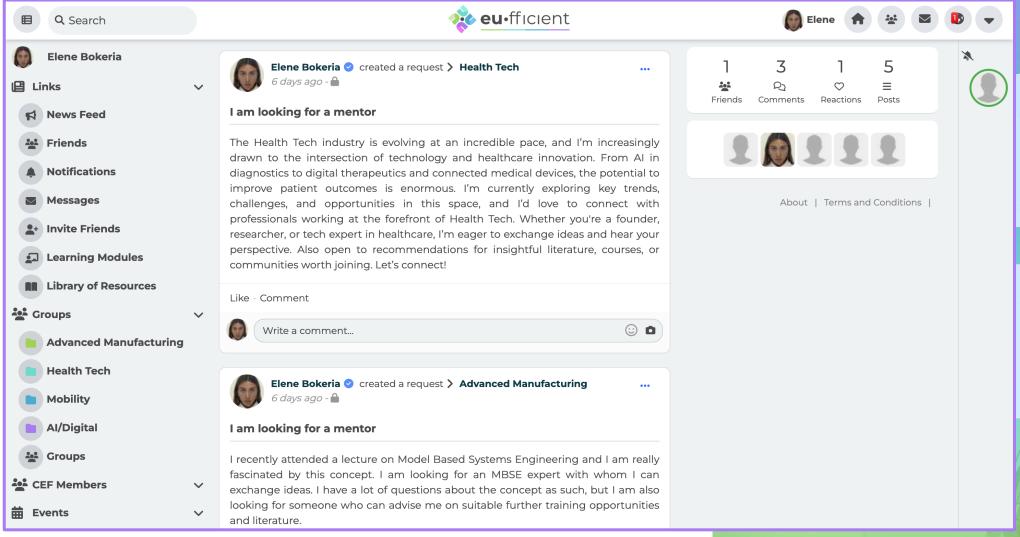

Platform Demonstration

Elene Bokeria – Innoget

Platform demonstration

I. Question

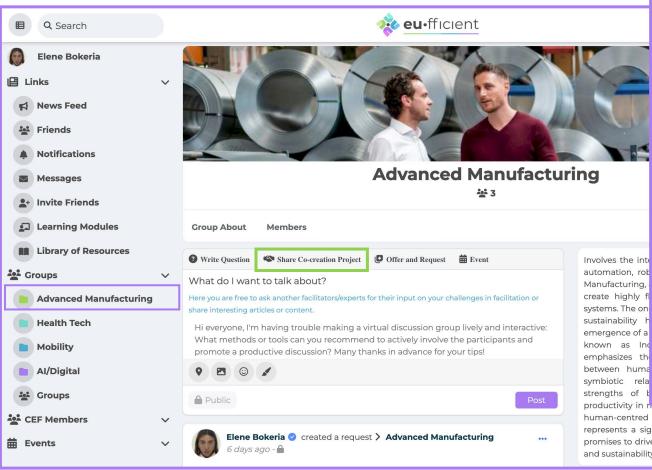

II. Co-creation Project

Post your co-creation project

Format name

Integrating AI technologies into the next generation of autonomous vehicles

What do I wanna talk about?

Share details about your co-creation project, its goals, and invite others to join the conversation.

Hello everyone, I am currently hosting a Co-Creation project with our colleagues from CompanyXY, where we are supporting young talents to apply their theoretical knowledge from university in a practical context. Our talents are working on integrating AI technologies into the next generation of autonomous vehicles over the course of two semesters. If you want to follow the process, please follow me on EU.FFICIENT, as I will be posting updates regularly.

Group

Advanced Manufacturing

Post

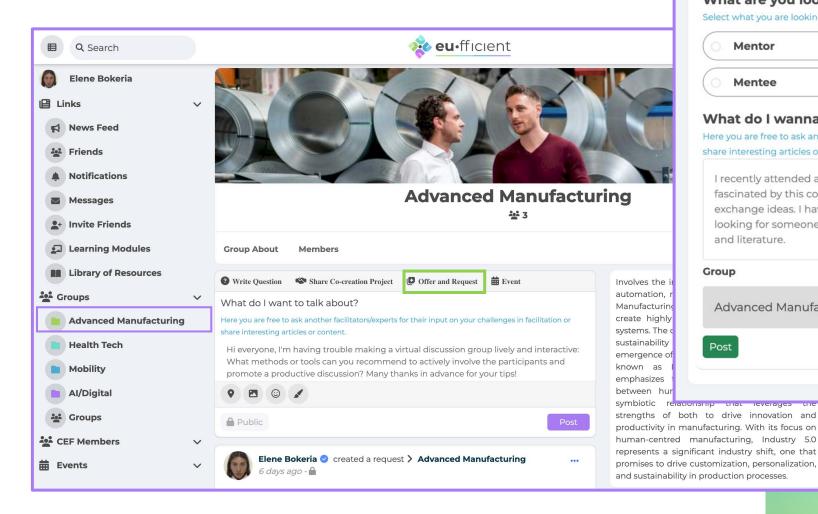

productivity in manufacturing. With its locus on human-centred manufacturing, Industry 5.0 represents a significant industry shift, one that promises to drive customization, personalization, and sustainability in production processes.
